

Description:

Test strips for determining the silver concentration and the pH value in fixing baths.

Pack content:

1 aluminium container with 100 test strips

Hazard warnings:

This test does not contain any hazardous substances that require mandatory labelling.

General indications:

Remove only as many test strips as are required. Close the container immediately after removing a strip. Do not touch the test field.

Additional indications:

1. Ag-Fix cannot be used for fixing baths with pH values lower than 4.
2. To achieve a more exact determination of the silver content in concentrated solutions (more than 5 g silver per liter), dilute the solution with water in a ratio of 1:1 or 1:2. This will move the silver concentration value to the lower range of the test strip, where the reaction is the most sensitive.

Instructions for use:

1. Dip the test strip shortly in the fixing bath.
2. Shake off excess liquid.
3. Wait 30 seconds.
4. Compare with the color scale.

Depending on the silver concentration, the yellow test field furthest away turns brown. The pH value can be determined at the same time.

Interferences:

Iron and copper ions will interfere, resulting in a false-positive reaction. These ions can be determined with the rapid tests QUANTOFIX® Total iron 100 (REF 913 44), QUANTOFIX® Total iron 1000 (REF 913 30) and QUANTOFIX® Copper (REF 913 04).

Storage:

Avoid exposing the strips to sunlight and moisture. Keep container cool and dry (storage temperature not above +30 °C).

If correctly stored, the test strips may be used until the use-by-date printed on the packaging.
